

Case Study: Hospira

Aseptic manufacturing facility

This high-tech, state-of-the-art, manufacturing facility was successfully delivered by Bassaire within tight fiscal and programme constraints. Executed on a turnkey basis, Bassaire undertook the scheme development, detailed design, installation, commissioning and complete validation of this highly complex project build.

Working in liaison with the critical equipment suppliers, Bassaire's expertise was challenged to design and develop a scheme flexible enough to accommodate initial and future capacity requirements. Working closely with the client team the facility design incorporates sophisticated isolator technology within grade C and D cleanroom areas together with peripheral unclassified support spaces.

With licensing requirements for MHRA compliance, our in-house team supported the complete lifecycle validation programme undertaking all facility and HVAC system DQ, IQ and OQ protocol preparation and execution.

With a building requiring main utility upgrades, Bassaire coordinated all necessary service integration including all HVAC, mechanical and electrical services the overall project being delivered on time with build quality exceeding client expectations.

Other products and services

Bassaire has over fifty years experience in the design, manufacture, installation and maintenance of cleanrooms and clean air products.
