

Net Carbon Zero Commitment Statement

Bassaire Cleanrooms Limited is committed to achieving Net Carbon Zero emissions by 2050. As part of our commitment to combating climate change, we pledge to reduce our carbon footprint to the lowest possible level through a combination of operational efficiencies, sustainable practices, and investment in renewable energy technologies.

Our strategy will include the following key actions:

1. **Measuring and Monitoring Emissions:** We will conduct regular assessments of our direct and indirect carbon emissions, following recognized standards and frameworks such as the Greenhouse Gas (GHG) Protocol.
2. **Reducing Carbon Emissions:** We will take aggressive steps to reduce emissions across our operations, including transitioning to renewable energy, improving energy efficiency, and minimizing waste.
3. **Carbon Offsetting:** For emissions that cannot be eliminated, we will invest in credible carbon offset programs, such as reforestation initiatives and renewable energy projects, to neutralize our environmental impact.
4. **Engaging Stakeholders:** We will work with our employees, suppliers, customers, and partners to raise awareness and drive collective action towards reducing the carbon footprint across the value chain.
5. **Transparency and Reporting:** We will provide regular updates on our progress towards Net Carbon Zero and ensure transparency in our efforts, aligned with global sustainability standards and best practices.

We recognize that achieving Net Carbon Zero is an ongoing process that will require dedication, innovation, and collaboration. By committing to this goal, we aim to contribute to a more sustainable future for our planet, its ecosystems, and future generations.
